Document 1: WO, 01-59508, A1 (Sony Corp.), 7 February, 2001 (07.02.01)

Document 2: JP, 52-98385, U (Matsushita Electric Industrial Co., Ltd.), 25 July, 1977 (25.07.77)

Document 3: JP, 8-98214, A (Terumo Corp.), 12 April, 1996 (12.04.96)

The subject matters of claims 1-10 and 13 do not appear to involve an inventive step in view of documents 1 and 2 cited in the ISR. A person skilled in the art could have easily conceived of the idea of using an invented linear light-emitting source described in document 1 in combination with an LED provided with prisms described in document 2. It is not considered that either (1) the feature of the brightness at the center part different from that at both end parts or (2) the feature wherein the prisms on the periphery and that at the center part are separate bodies from each other, and are molded in an integrated form with the intervening circumferential part of the light-outputting face as corresponding to a required number of point-shaped light sources, produces any particular effect. Such features are matters that a person skilled in the art might decide on as required.

The subject matters of claims 12 and 13 do not appear to involve an inventive step in view of documents 1-3 cited in the ISR. The inventions described in documents 1 and 3 belong to technical fields analogous to each other, so a person skilled in the art could have easily conceived of the idea of disposing the linear light-emitting source described in document 1 at almost equal distances to the center part of a liquid-crystal panel, following the descriptions in document 2.
